FUNCTION: GLUTENINS ARE THE HIGH MOLECULAR WEIGHT SEED STORAGE PROTEIN OF WHEAT ENDOSPERM. THOUGHT TO BE RESPONSIBLE FOR THE VISCO-ELASTIC PROPERTY OF WHEAT DOUGH.

SUBUNIT: DISULFIDE-BRIDGE LINKED AGGREGATES.
MISCELLANBOUS: GLUTENINS ARE CODED BY SEVERAL GENES ON EACH OF GROUP 1 CHROMOSOMES OF WHEAT.

MISCELLANBOUS: THE MATURE PROTEIN IS CHARACTERIZED BY A LARGE NUMBER OF WELL PRESERVED REPEATS OF THE TWO MOTIFS: GOOPGO AND
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              GQQPGQGQQGYYPTS.
